

SCADA Cybersecurity

Lawrence Kravets

Overview

What are we covering?

- Introduction and bio
- History
- State of Cybersecurity for SCADA
- Q&A

Lawrence Kravets

IT Director

My story:

- University of Illinois at Chicago, 94
- Certified Information Systems Security Professional (CISSP)
- Global Industrial Cyber Security Professional (GICSP)
 - 25+ years in Information Technology
- 12 years in IT / OT @ Concentric Integration

SCADA

Supervisory Control and Data Acquisition

- “Humble Beginnings”
 - Started off as a single computer with SCADA
 - Not very complex
 - Analog / serial connected devices
 - No remote access
 - Limited exposure to malware

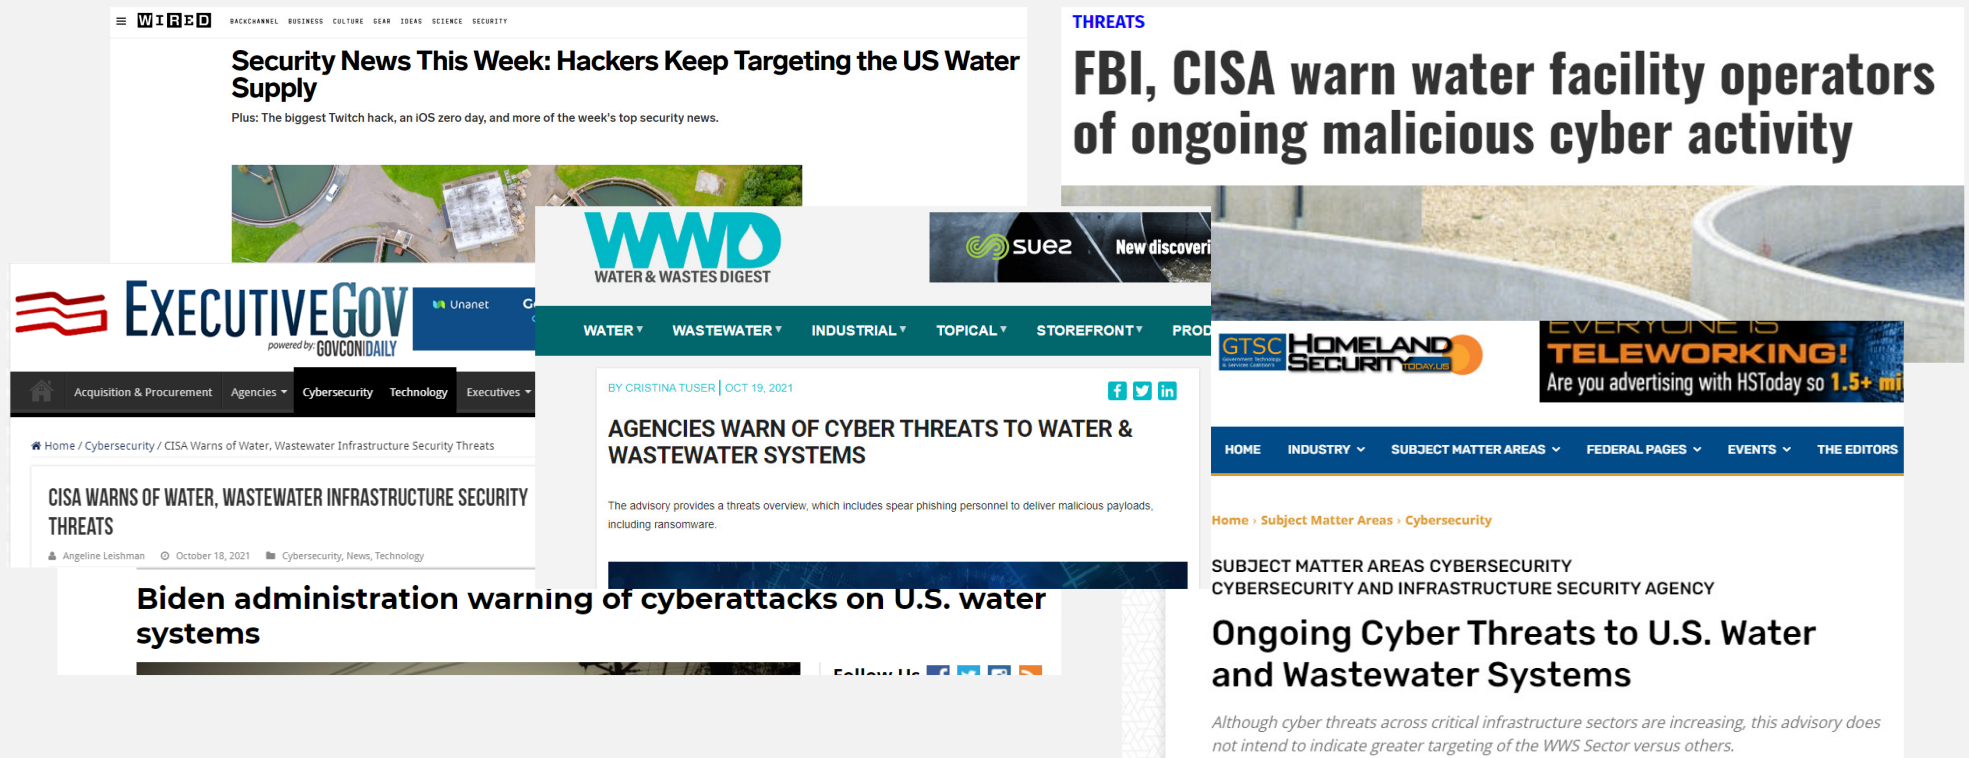

A grayscale photograph of a person's hand turning a large, textured dial on a control panel. Above the dial are several smaller knobs and a keyboard. The background is blurred, showing industrial equipment. On the right side of the image, there are decorative blue and gray curved lines.

SCADA Now

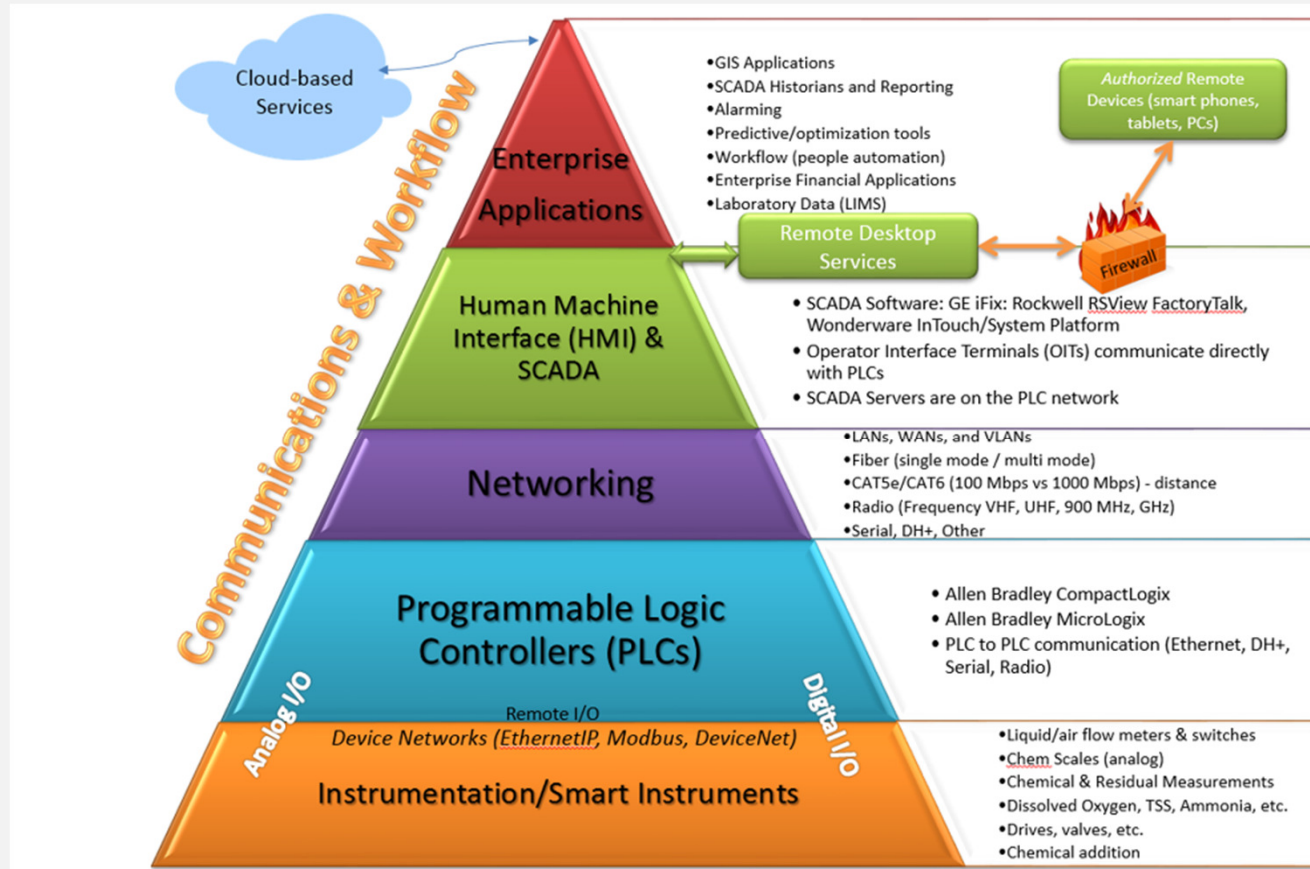

Complexities!

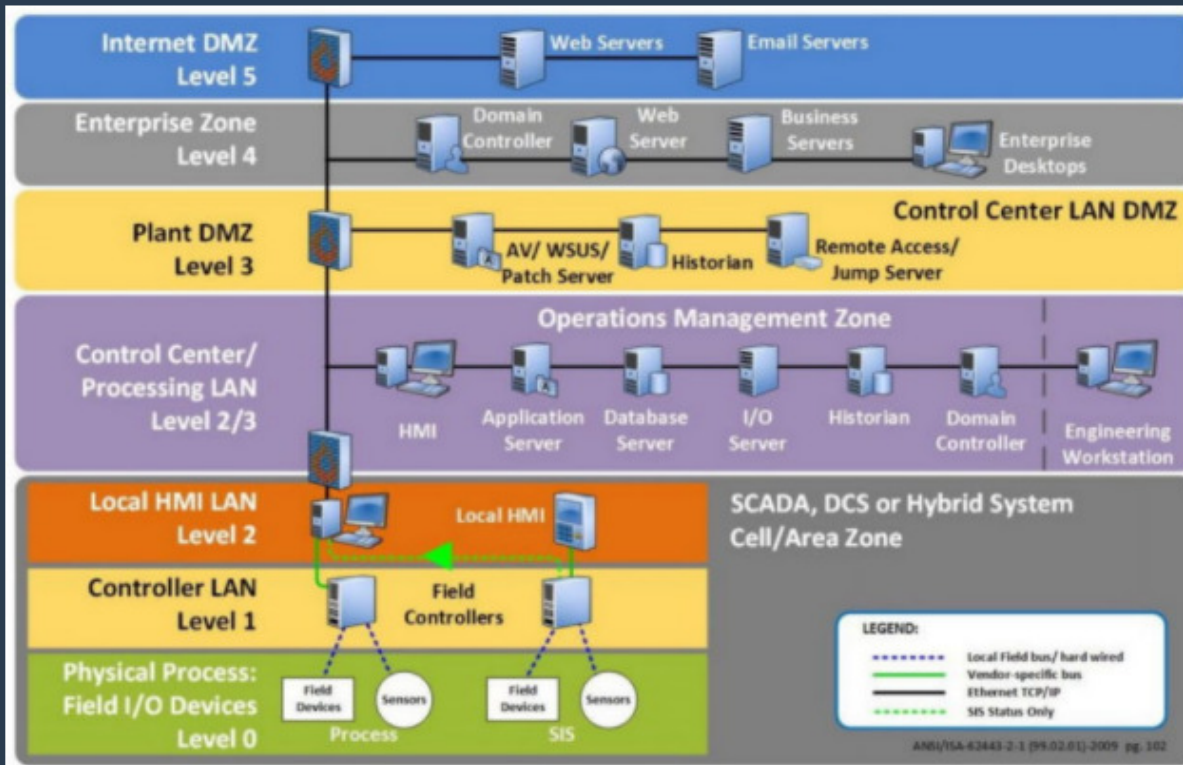

- Internet connected
- Virtualization
- Remote access
- Reporting
- Smartphones and tablets
- Malware and Ransomware
- Disaster recovery
- Cloud
- Cellular
- Licensing
- Cyber-insurance

SCADA Now - In the news media...

What makes up a SCADA System?

Purdue Model ICS – how to defend SCADA

Now what?

- It may seem very overwhelming
- Find help, your IT department / Contractor / SCADA Integrator
 - Even Homeland Security
- Start making lists maybe performing SCADA master plan
- Having documentation is key
 - Network diagrams
 - Commented PLC code
- It's best when its not last minute or an emergency

A grayscale photograph of a hand in a white lab coat sleeve adjusting a large, textured knob on a control panel. In the background, a keyboard is visible on a desk. The image has a blue and gray abstract graphic overlay on the right side.

What are some simple things you can do?

- Make sure you are running supported Operating Systems
 - No Windows 7 or XP
- Patch your Windows systems
 - Windows Updates
- SCADA software updates
- Install Antivirus or Endpoint Detection and Response (EDR)
 - Make sure it updates daily
- Backups
 - Keep a base system configuration off the network (thumb drive)
 - “dial tone”
- Proactive maintenance
 - Update firewalls, PLCs, HMIs, and other devices

A grayscale photograph of a person's hand turning a large, textured dial on a piece of industrial machinery. In the background, a computer keyboard is visible on a control panel. The image has a blue and gray abstract graphic overlay on the right side.

What are some simple things you can do?

- Strong passwords
- No default passwords
- Network segmentation using a dedicated SCADA firewall
 - Protect the SCADA network from access outside the SCADA network
- No critical infrastructure should be available directly on the internet
 - Put things behind a security device like a firewall
- Secure any remote access using multifactor authentication
 - Username + password + time-based token = access

Best practices when using SCADA

- Do not check email on the same system that you use to access SCADA
 - Targeted spear-phishing attacks – how someone gets a “foothold” in your network”
- Limited or no internet access on SCADA computers
- Have accounts log off into guest mode when not using (view vs control)
- Make sure your people have the rights to do what they need but not more than they need

Advanced topics

- Virtualization
- Private cellular networks
- Unidirectional gateways
- PLC modes – run vs remote modes
- Disaster recovery and business continuity (plan for issues and test)
 - Incident response planning
- Penetration testing (validate your security controls)

Advanced topics

- Port security on network devices
 - Lock it until it's needed
- Intrusion detection systems
 - Detect abnormal traffic
- Cameras
 - Physical security
- Monitoring service
 - Have a service actively monitor your network
- Individual usernames and passwords
- Password management
 - Passwordless?

Q&A
